

Data sheet

Manual Presetting Valves LENO™ MSV-B

Description

LENO™ MSV-B is a combined presetting and shut off valve with a range of unique features:

- Removable hand wheel for easy mounting.
- Numeric presetting scale, visible from more angles.
- Easy locking of presetting.
- Built-in measuring nipples for 3mm needles.
- Open-close with Allen key in emergency.
- Open-closed colour indicator.

It is recommended to use LENO™ MSV-B in constant flow systems in front of boilers, flat stations or heat pumps in one-family houses for balancing, shut off function for service and repair, flow verification, one-pipe systems. The valve may be mounted in flow or return.

DN 15 valves are available with internal or external thread. Other dimensions with internal thread.

LENO™ MSV-B is a new generation of manual valves for balancing flow in heating, cooling and domestic hot water systems.

Danfoss PFM 1000 measuring instruments contain valve data for LENO™ MSV-B in memory.

Application

Boiler, flat station or heat pump in 1-family houses.

- For balancing.
- Shut-off function for service/repair.

Application (continuous)

Air handling unit

- For constant flow.
- For balancing.
- Shut-off function for service/ repair.

1-pipe system

- For balancing.
- Shut-off function for service/ repair.

Fan coils

- For flow verification.
- Shut-off function for service/ repair.

Ordering

	G 3/4 x 18	013G4128

Design

- 1. Valve house
- 2. Ball
- 3. Ball seat
- 4. Support screw
- 5. Throttle
- 6. Spindle head
- 7. Spindle
- 8. Shut off bush
- 9. Spring
- 10. Rotation lock
- 11. Top
- 12. Measuring nipple
- 13. Handle
- 14. Gasket for support screw

Technical Data

Materials and parts in contact with water

Valve body	DZR brass
O-rings	EPDM
Ball	Brass/chromium plated
Ball sealing	Teflon

Max. static working pressure	20 bar
Static test pressure	30 bar
Max. differential pressure across valve	2.5 bar (250 kPa)
Max. flow temperature	120 °C
Min. temperature	-20°C
Cooling liquids	Ethylene glycol / propylene glycol and HYCOOL (max. 30 %)

Fitting

Before fitting the valve the installer must ensure that the pipe system is clean and:

- 1. the valve can be turned 360 degrees (if threaded pipe is used).
- 2. the valve is fitted according to the flow direction arrow.

Removal of the handle

- 1. Set the handle at 0/0.
- 2. Release the setting lock (green).
- 3. Unscrew the union nut.

Calibration of the handle

Before refitting, ensure that the handle setting is 0/0.

For DN 15 valves with external thread

Danfoss offers a complete range of compression fittings for steel, copper and PEX pipes.

DN	R1/R2 (mm)
15	96/58
20	99/60
25	101/63
32	124/87
40	127/90
50	131/94

Shut-Off

In order to shut-off the valve the handle must be pressed down.

The shut-off function features a ball valve, which only requires a 90 degree turn to shut the valve completely.

An indicator window shows the actual setting:

- red = closed
- white = open

Setting and Locking

The valve has a built-in presetting feature for accurate flow ratings.

Setting the required flow is made in 5 steps:

1. In open position, release the lock using the green lever or a 3 mm Allen key.
2. The handle pops up automatically.
3. The calculated value can now be set.
4. The setting is locked when the handle is pressed to click.
5. Seal - the setting can be protected by using a strip as shown.

Measuring

The flow through the LENO™ MSV-B valve can be measured using Danfoss PFM 1000 or other brands of measuring instruments. The LENO™ MSV-B valve is supplied with two measuring nipples for 3 mm needles. A twin bracket enables the user to connect both needles simultaneously.

Procedure for flow measuring:

1. Select flow measuring
2. Select valve brand
3. Select valve type and dimension
4. Enter presetting
5. Connect valve and instrument
6. Calibrate static pressure
7. Measure the flow

Measuring Accuracy

The red line indicates 25% of max. flow.

According to BS7350:1990 flow rates must be within following values:

- ± 18 % at 25 % open position
- ± 10 % at fully open position

LENO™ MSV-B is very accurate, due to the separate functions for presetting and shut-off.

K_v -Signal

K_v -signal values are used for non-Danfoss measuring instruments. Danfoss PFM1000 have all data in memory, and the instruments are using this formula:

$$P_{val} = P_{sig} \left(1 + 4 \cdot \frac{k_{v-sig}}{k_{v-val}} \right)^2$$

Δp across the measuring nipples (k_{v-sig}) and Δp across the valve (k_{v-val}) is not the same due to turbulence influence for pressure measuring.

** with software 9.4 or higher*

Valve Size and Presetting

Example:

Given

Max. pipe flow $Q = 2.0 \text{ m}^3/\text{h}$

$\Delta p_r = 15 \text{ kPa}$

$\Delta p_a = 45 \text{ kPa}$

$\Delta p_m = 10 \text{ kPa}$

$\Delta p_i = \Delta p_a - \Delta p_v - \Delta p_m$

$\Delta p_i = 45 \text{ kPa} - 15 \text{ kPa} - 10 \text{ kPa} = 20 \text{ kPa}$

Correct valve size and presetting is found in flow diagramme, page 7.

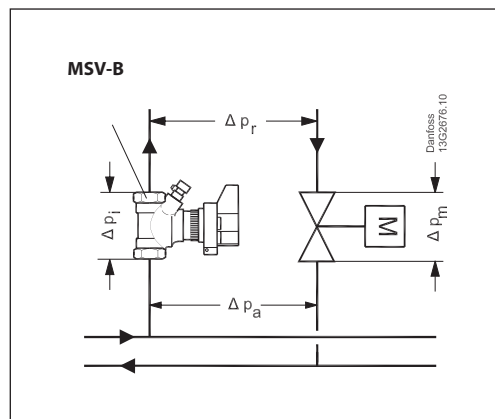

$Q = 2.0 \text{ m}^3/\text{h}$ and $\Delta p_i = 20 \text{ kPa}$

On page 12 intersect guides and presetting is found to be 4.2 (DN 20 valve)

Setting can be also calculated from the formula:

$$k_v = \frac{Q[\text{m}^3/\text{h}]}{\sqrt{p_i[\text{bar}]}} = \frac{2.0}{\sqrt{0.20}} = 4.5 \text{ m}^3/\text{h}$$

which corresponds to presetting 4.2 as shown on pages 7 and 12.

Δp_i Pressure drop across LENO™ MSV-B valve

Δp_m Pressure drop across valve

Δp_r Necessary pressure for the riser

Δp_a Available pressure for the riser
